PROFESSIONAL EXPERIENCE

Software Engineer, *Wells Fargo* 08/2024 – Present | Bengaluru, Karnataka

- Contributed to a data lake platform that supported bank risk calculation by processing and managing **large-scale sensitive financial data.**
- Leveraged **generative AI for end-to-end feature development**, accelerating delivery of production-ready code with subsequent validation and integration.
- Reduced manual effort by automating release workflows for non-production environments through scripted branch creation, version bumps, and related code changes.
- Diagnosed and resolved issues in data-processing workflows by **analysing dataset patterns**, validating data types, and debugging failures in aggregation operations.
- Led the migration of services from **Red Hat Enterprise Linux 8 (RHEL 8) to RHEL 9**, ensuring compatibility, stability, and successful deployment within two sprints supporting a cost-saving technology mandate.
- Debugged and resolved production incidents by **tracing data lineage across extract, transform and load (ETL) pipeline** and micro services, preventing recurring failures in downstream aggregation workflows.
- Collaborated cross-functionally to reproduce edge-case issues and implement long-term fixes, streamlining build–deploy cycles and reducing manual effort.

Program Associate, *Wells Fargo* 08/2023 – 08/2024

- Built reusable Python core modules that improved data-processing accuracy and reduced manual effort in recurring analysis tasks.
- Developed a backend micro service in Flask to extract and process data from upstream sources and stage them for downstream applications.

Intern, *Wells Fargo* 02/2023 – 08/2023 | Bengaluru, Karnataka

- Built an automated email service with **micro service architecture using Python**; integrated with core services to auto-trigger emails based on predefined events.

PROJECT

Video calling application , *GitHub*
Developed a full-stack web application with JavaScript, Node.js (server.js) and Heroku deployment (Procfile) to demonstrate end-to-end development skills.

Contact Management App , *GitHub*
Built a RESTful backend application using Node.js and Express.js, implementing CRUD APIs, middleware-based error handling, and asynchronous request processing. Integrated MongoDB with Mongoose for data persistence and implemented JWT-based authentication and authorization.

PUBLICATIONS

Multimodal Detection of Offensive Content in Hindi Memes
https://dl.acm.org/doi/10.1145/3717611

- Conducted research on multimodal machine-learning techniques for detecting offensive Hindi memes, leveraging both image and text features.
- Created and annotated a dataset of 9,262 memes, labelled as offensive/non-offensive, and additionally developed a balanced subset of 3,732 images to address class imbalance.

SKILLS

Backend & Data Engineering — Python, Java, SQL | RESTful APIs, Microservices (Flask) | ETL Pipelines, Data Validation Frameworks | MongoDB, Dremio, PostgreSQL

DevOps & Tooling — CI/CD - Git, Jenkins, UCD, GitHub Actions, Harness, Heroku | Linux, Postman, Agile Jira, Splunk, Amazon S3, Copilot

EDUCATION

Indira Gandhi Delhi Technical University For Women, *Bachelors in Technology* 05/2019 – 05/2023
CGPA - 8.1
